

Industrial Placement Weekly Learning Report

Week Commencing: 15 June 2026

Week No. 7

This document may be typed. Hours should add up to the total worked in the day. The breakdown should be no less than 1 hour and no greater than 4 hours.

Day	Activity	Hours
Monday	Drafted the Introduction and Related Work sections of the IEEE paper using the A4 conference template.	3
Tuesday	Completed the Methodology and Implementation sections and reviewed practical work carried out during previous weeks.	4
Wednesday	Wrote the Results and Analysis section, including performance tables and discussion of findings.	3
Thursday	Wrote the Conclusion section and formatted the paper according to IEEE requirements.	2
Friday	Selected screenshots and figures to be included as evidence of practical implementation and reviewed references.	2
Saturday	Added GitHub repository references and checked overall paper structure and page length.	2
Sunday	Proofread the first complete draft and prepared supporting documents for future submission.	1

Weekly Learning Outcomes

During this week, progress focused on writing the first complete IEEE paper draft based on the practical work undertaken throughout the project. Academic writing skills were developed through the preparation of the Introduction, Methodology, Implementation, Results and Conclusion sections. Performance data collected from the practical deployment of lightweight Linux distributions and Docker-based services was analysed and presented using tables and figures. The work completed this week contributed towards demonstrating the ability to plan, implement, evaluate, and document a technical project while communicating findings in an appropriate academic format.
