

Industrial Placement Weekly Learning Report

Week Commencing: 22 June 2026

Week No. 8

This document may be typed. Hours should add up to the total worked in the day. The breakdown should be no less than 1 hour and no greater than 4 hours.

Day	Activity	Hours
Monday	Reviewed the IEEE paper and made final corrections to formatting, references, and section structure.	3
Tuesday	Organised screenshots, performance tables, and supporting documentation for inclusion in the final submission.	1
Wednesday	Created and populated the GitHub repository with project files, documentation, and evidence required to replicate the work.	2
Thursday	Added references to the GitHub repository within the IEEE paper and verified all figures and tables.	1
Friday	Proofread the complete paper and checked that it met the four-page IEEE A4 requirement.	1
Saturday	Reviewed weekly reports and ensured all project documentation was complete and ready for submission.	1
Sunday	Prepared and submitted the final project deliverables.	1

Weekly Learning Outcomes

During this week, the project was finalised and prepared for submission. Activities focused on refining the IEEE paper, organising supporting evidence, and ensuring that all practical work could be reproduced through the accompanying GitHub repository. The completion of the project demonstrated the ability to document technical work in an academic format, present and analyse performance data, and communicate findings effectively. The work undertaken throughout the project also demonstrated practical skills in Linux system administration, virtualisation, Docker container deployment, performance evaluation, and technical reporting.
